

Stuff provided by the school:

- Six fairly vintage Dell desktop student workstations, probably from 2007: five have LCD monitors, and one has a fuzzy old CRT monitor because its monitor “fell over.” Each of these has a USB microphone headset, mouse/keyboard, and a DVD drive/candy wrapper storage slot. Ah, high school.

- Teacher workstation: older Dell Optiplex tower running Windows XP.

- Hitachi LCD projector: since I only have one 10' chalkboard in the classroom and no white board, this thing is my salvation.

Stuff I use at school but bought myself:

- Canon color printer/scanner: gift from my husband—cheap, but the toner costs are deadly.

- Satechi S400 Smart Pointer: combo laser pointer/mouse/presentation remote.

- IPEVO document camera: I couldn't afford anything fancier, but I did get this on Amazon for about \$70. It works awfully well for the price! Excellent document camera, and also a pretty good webcam! The live video feed is pretty laggy, but I think that's more because I run it from my netbook, and the software that came with it is mediocre. But come on, \$70! It can't grab a whole page document without being propped up higher, but it looks like they have a newer model called a ZiGGI.

- ASUS 1101HA eee PC: Got sick of having to run stuff from the desktop across the room, so I use this personal netbook for everything except taking roll, basically. I'm not allowed to attach it to the network, of course. About to upgrade to something that can successfully play video.
